Product Case Study

This case study will give you a sense of the real-world challenges we tackle daily, and help us get a glimpse of your thinking, problem solving abilities, and approach to building products.

Your Task

Envision you're the Product Manager for a digital insurance product on a app. Your team noticed that many users who begin the insurance purchase journey don't complete it. At the same time, customer support frequently hears feedback about confusion around policy details, add-on options, and payment steps.

Your goal is to understand what's happening and identify meaningful opportunities to improve conversions.

We'd like you to:

1. **Analyze the provided dataset** to identify key opportunities to improve conversions in the insurance purchase journey.
2. **Prioritize high-impact opportunities** and propose a focused solution.
3. Define an MVP—the **simplest version to validate your idea** and explain how you'd **measure success**.
4. Briefly outline how you would **launch and drive adoption** for this solution.

Present your analysis with clear explanation of your thought process, the decisions you made, and your recommended solution.

Show your perspective and creativity in this problem-solving exercise. Avoid long approaches, detailed process descriptions, textbook knowledge, or generic insights.

Product Case Study

Dataset

Download the dataset: **Insurance Dataset**

Variable in the file:

Variable	Description
UserID	Unique identifier for each user
Age	Age of the user
SalaryBand (AED)	Salary range segment of the user (e.g., <2000, 2000-3000, etc.)
PolicyType	Type of insurance selected: Health, Life, or Accident
PlanDuration	Duration of the insurance plan: 6 Months, 1 Year, or 2 Year
PaymentType	User's chosen payment method: Monthly, One-Off, or Quarterly
InsurancePremiumAmount	Calculated premium cost for the plan (monthly or one-time), in AED
AddOnsSelected	Optional add-on cover selected by the user (e.g., FamilyCover)
AddonDropOff	Whether the user abandoned signup after seeing add-on pricing
SignupCompleted	Indicates whether the user completed the full insurance signup
TimeOnSignupPage(s)	Time (in seconds) spent on the signup flow
DropOffStage	Stage at which user exited the flow: Policy Selection, Payment, etc.
TermsPageScrollDepth (%)	How much of the terms and conditions page was scrolled through (0–100%)
AbandonTimestamp	Timestamp at which user exited the flow
IntentScore	Predicted interest level (Low:1–High:10), based on past interactions
PolicyLiteracyScore	Estimated understanding of policy information (Low: 0 – High:10)
AcquisitionSource	Channel through which user entered signup: App Store, Referral..
SupportInteractionBeforeSignup	Whether the user contacted support before attempting signup
DaysSinceSignup	No. of days user has been on the platform before trying insurance
PreviousProductUsed	Previously used C3 product: Recharge, Money Transfer, or None
PolicyRenewalIntent	User's stated intent to renew policy: Likely, Unlikely, Unsure, or N/A
ReferralSharedAfterSignup	Whether the user shared a referral after completing the signup
CustomerFeedback	Open-text feedback from the user (if any)
